Summary

With extensive experience as a Fullstack Developer specializing in Frontend development, I have gained in-depth knowledge of JavaScript frameworks such as React, Next.js, Vue, and Nuxt.js, as well as TypeScript, UI/UX design, Git, databases, and Docker. My passion lies in developing innovative and effective software solutions.

Among the successful projects I have implemented are an authentication system for international companies, an app for digitizing application processes, and a modular web hosting system for student projects.

Previously, I worked as a certified social care worker, assisting individuals in their daily lives. After completing a retraining program, I now help people virtually, having turned my passion for technology into a profession.

Experience
